News From the Chapters

The Eastern New York Chapter of ACRL held its fall meeting at the State University of New York at Cortland on October 1, 1976.

The meeting consisted of seven roundtable discussions which were available in both morning and afternoon sessions. The group leaders were drawn from the chapter, thus providing an opportunity for the membership to utilize its expertise in various areas of librarianship.

The topics discussed were "Minicomputers in Libraries," led by.John Linford, State University of New York at Albany; "Library Instruction," Lynn Case and Jon Lindgren, St. Lawrence University, Canton, New York; "Public Relations and Orientation," Jacquelyn Gavryck, SUNY, Albany; "Which Services and to Whom," Irving Stephens, Rensselaer Polytech-

nic Institute, Troy, New York; "Weeding Library Collections," Mina LaCroix and Barbara Rice, SUNY, Albany; "Budgeting for Library Acquisitions," Sue Weaver, St. Lawrence University; and "Interlibrary Loan," Lee Dalzell, Williams College, Williamstown, Massachusetts.

Comments solicited on a questionnaire distributed by the Program Planning Committee indicate that the informal nature of the program was conducive to productive group discussion and that the format should be repeated next year.

Evaluative interviewing will be the subject of the spring meeting to be held at Williams College on May 26, 1977. Sheila Creth of the University of Connecticut, Storrs, will be the featured speaker. ■■

american libraries HOGS*

Outfox them with copies for everyone

There are several common breeds: the administrator who delays passing along the copy of **american libraries** that comes with the library's ALA membership ... the staff member who takes the route-slip copy along on vacation to the Costa del Sow ... the ALA personal member who receives a copy at home and goes around with a smug, all-knowing expression.

You can't blame them for hogging **american libraries.** It's so filled with useful information that reading it takes *time.*

The solution is to oink for one or more additional subscriptions at $20 a year. (Libraries that don't belong to the ALA can now keep up with the field by subscribing directly to **american libraries** at the same price.)

More than ever, **american libraries** keeps all library personnel in the mainstream of the library profession. It makes them more effective in their jobs.

Consider "The Source"— a major section of the magazine that delivers more up-to-the-minute and useful library news in one place than you can find anywhere else. It's filled with reports on official actions, successful programs, things to write for, how to get jobs, educational opportunities, media, technical breakthroughs and other valuable data too important and too timely to be withheld by delay in routing.

And there's the new "Action Line" department that tackles readers' most urgent library questions — another example of the magazine's new emphasis on information and service to working librarians.

Send in the coupon today and you'll soon be able to hog your own **american libraries** with a clear conscience.

Foundations of Microprogramming

Architecture, Software, and Applications

by ASHOK K. AGRAWALA and TOMLINSON G. RAUSCHER

A Volume in the ACM MONOGRAPH Series

"Agrawala and Rauscher present a fine survey of the current status of microprogramming. The well-written introductory chapters provide a framework for detailed analysis of the architecture and the vertical, horizontal, and diagonal microprogramming of thirteen existing computers.

Chapters on microprogramming languages, applications, and suggested areas for further research complete their well-conceived effort. The book is remarkably readable, considering the dryness of the material in the detailed examples . . . this volume belongs in any library used by undergraduate or graduate students interested in computer science." —*Choice*, September 1976

Computer Chess

by MONROE NEWBORN

A Volume in the ACM MONOGRAPH Series

"Making digital computers play chess is a fascinating and challenging programming problem. Newborn's book begins by reviewing the history of computer chess—from early contributions by von Neumann, Shannon, and Turing to the ongoing work of current practitioners. The historical material is interwoven with the basic ideas used to implement the chess program algorithms. Most of the remaining chapters describe specific programs and some of the games in which they were used. . . . Citing many references throughout and containing a short index, this book may be enjoyed by any chess player interested in how computers play the game and by others curious about how computers may be programmed for this purpose."—*Choice*, December 1975

Information for Action

From Knowledge to Wisdom

edited by MANFRED KOCHEN

A Volume in the LIBRARY AND INFORMATION SCIENCES Series

"This work addresses itself to WISE (World Information Synthesis Encyclopedia) or the idea of a "world brain." In the first part, the basic issues and priorities of information science and technology and their relation to social problems are discussed. The second section contains papers on the utilization of knowledge and information. The concluding section deals with the challenges of, and potential responses to, the use of knowledge for action in the future. . . . There are many valuable insights and observations in this book, and it will be useful to a wide range of people, especially those working in information science."— *Science*, September 1976

High-Level Computer Architecture

edited by YAOHAN CHU

"Several experts in the field discuss aspects of high-level language (HLL) computer architecture—computer structures conceived and designed for directly accepting and executing programs written in a high-level language. . . . Clear, relevant illustrations contribute a great deal to the text. . . . Previously, HLL computer architecture has been covered primarily in journal, symposia, and report literature; this well-organized, thorough presentation of the subject will be a welcome addition to any computer science collection." —*Choice*, July/August 1976
