Abstract: Maternal and infant care teachers are professionals specializing in maternal and infant care, with certain professional quality and skill requirements. This paper aims to summarize the professional quality and skill requirements of maternal and infant care nurses. In terms of professional quality, maternal and child care teachers need to have good communication skills and interpersonal skills to cooperate effectively with family members and other health care staff. They should also have keen observation and patience, able to take meticulous care of the needs of the mother and baby. In addition, they need to have a sense of confidentiality and professional ethics, keep patient information confidential and respect patient privacy. In short, the professional quality of maternal and infant care teachers requires them to have good communication skills, interpersonal skills and observation skills, while maintaining a professional sense of confidentiality and professional ethics. In terms of skill requirements, they need to master basic medical knowledge and nursing skills, and be familiar with maternal rehabilitation and early childhood knowledge. These requirements enable maternal caregivers to provide high quality maternal and infant care services.

Keywords: Mother and child; Nurse; Professional quality; Skill requirements.

1. Introduction

Maternal and infant care teachers are professionals undertaking the education of maternal and infant care, who play an important role in cultivating and guiding the abilities and skills of women and family members in maternal and infant care. In order to be competent for their education work, maternal and infant care teachers need to have certain professional quality and skills. This paper aims to explore the professional quality and skill requirements of maternal and infant care teachers to improve their educational level and ability and provide quality nursing education services for mothers and infants.

2. Professional Quality Requirements

2.1. Responsibility and love

Responsibility and love are one of the very important requirements in the professional quality of maternal and infant care teachers. As a mother and child care teacher, I must have a strong sense of responsibility in the work, which means to be responsible for their own work, responsible for the entrusted babies and families. This means always being vigilant and taking appropriate action to ensure the safety and well-being of the baby.

At the same time, love is also one of the indispensable qualities of maternal and child care teachers. Not only to provide basic life care and medical care, mother and child care teachers also need to give babies warm care and care, so that babies can feel safe and loved. Maternal and infant care providers need to carefully observe and understand the babies' needs and emotions, and actively meet their needs and establish close emotional connections.

In the professional quality requirements, responsibility and love complement each other. Only with a high sense of responsibility, can ensure the safety and health of the baby; and only with enough love, can truly meet the emotional

needs of the baby. The sense of responsibility and love are interwoven, form the cornerstone of the professional quality of maternal and child care teachers. Through the continuous cultivation and promotion of the sense of responsibility and love, maternal and child care teachers can provide better nursing services, and give the most comprehensive care and support to infants.

2.2. Communication and coordination ability

Communication and coordination skills play a crucial role in the professional literacy requirements of maternal and infant care teachers. As a maternal and child nurse, communication and coordination skills are essential skills and essential for good communication with parents, family members, and other medical service personnel. Good communication skills can help maternal and infant care teachers to better understand the needs and care of parents, and effectively provide corresponding services and support. In addition, maternal and infant caregivers also need to have the ability to coordinate effectively with other healthcare providers to ensure continuity and consistency in maternal and infant care. Effective communication and coordination ability can not only establish a trust relationship with the family, but also provide a solid foundation for the smooth progress of maternal and child care work.

2.3. Observation and judgment ability

Observation and judgment ability is one of the necessary qualities of maternal and infant care nurses. The maternal and child care teacher needs to judge the needs and conditions of the baby by observing the baby's words, deeds and expression changes. Through careful observation of the baby's sleep state, diet, excretion frequency, etc., you can judge whether the baby is healthy and comfortable. At the same time, in the process of daily care, the observation and judgment of the baby's physical conditions, skin eczema, red buttocks and other abnormal conditions is also very important. Maternal

and child care teachers also need to observe the baby's emotional changes and crying, to judge whether the baby is in a comfortable state, whether the need to be emotional comfort or timely treatment. The improvement of observation and judgment ability can help the maternal and child care teachers to better understand the needs of the baby, make the right nursing decisions, and timely deal with the possible problems of the baby.

3. Maternal and Infant Care Skills Requirements

3.1. Neonatal care skills

Neonatal care skills are one of the important essential skills necessary for maternal and infant caregivers, and play a vital role in ensuring the health and growth of newborns. In the professional quality and skill requirements of maternal and child care teachers, the content of neonatal care skills include but not limited to the following aspects. Maternal and infant care teachers need to understand the physiological characteristics of the newborn, including the physiological development of the newborn, the characteristics of physiological function and the ability to adapt to the external environment, so as to be able to carry out scientific and reasonable nursing according to the characteristics of the baby. At the same time, according to the daily nursing needs of newborns, maternal and infant care teachers need to have certain nursing skills, such as giving the newborn the correct feeding methods and skills, cleaning and changing the newborn's diapers, and keeping the baby's skin clean and dry. In addition, maternal and child care teachers also need to learn to properly bathe the newborn baby, including mastering the applicable water temperature, used bath products, and bath methods and skills, to ensure the safety and comfort of the newborn in the bathing process. In addition, in terms of neonatal care skills, maternal and infant care teachers should also have the skills of baby massage, through moderate massage can promote the growth and development of babies, enhance immunity and relieve discomfort. In short, neonatal care skills require maternal and infant care teachers to have the basis of understanding the physiological characteristics of newborns, and have the correct feeding, cleaning, bathing, and massage skills to provide comprehensive professional nursing services.

3.2. Infant feeding skills

Infant and young child feeding skills need to have skills including but not limited to the following aspects: understand infant physiological characteristics and feeding needs, familiar with different age feeding methods and feeding control, master the correct feeding posture and skills, understand the advantages and disadvantages of various feeding methods and solutions to deal with common feeding problems. In addition, for the special circumstances of infants, such as premature infants, insufficient breast milk, etc., but also need to have the corresponding professional knowledge and skills to carry out scientific feeding guidance and treatment. At the same time, maternal and infant care teachers also need to teach parents to correctly guide infants to gradually eat independently, cultivate good eating habits and nutritional intake, to promote the healthy growth of infants and children. In the process of feeding, it is also necessary to pay attention to the satiety of infants, digestion and food allergies, timely solve various possible problems, to ensure

the health and safety of infants. In short, infant feeding skills are an important part of the work of maternal and child care teachers. Only with relevant knowledge and skills can we provide scientific, safe and high-quality feeding services for infants and young children.

3.3. Infant life and nursing skills

Infant life care skills are a necessary skill for maternal and infant care teachers, which involves all aspects of the daily life of infants and young children. Maternal and infant care teachers need to have infant feeding skills, including correct breastfeeding posture, formula formula and feeding methods. At the same time, they also need to understand the sleep needs and sleep posture of infants, which can help parents to make scientific sleep plans to solve the sleep problems of infants. In addition, the bathing and diaper changing of infants and young children are the links that cannot be ignored in daily nursing. Maternal and infant care teachers need to master the correct bathing methods to ensure the safety and hygiene of infants and young children. In addition, infants wear and change clothes also need to pay attention to. Maternal and child care teachers need to understand the size and material requirements of infants to ensure the comfort and health of infants. In addition, maternal and infant care teachers also need to master the basic knowledge of the prevention and emergency treatment of infant diseases, such as fever, diarrhea and other common diseases care methods. In short, infant life care skills are very important for maternal and infant care teachers. Only by mastering these skills can they better help their parents take good care of the daily life of infants and ensure their healthy and happy growth.

3.4. Infant health management skills

Infant health management skills are a very important skill requirement in the profession of maternal and child caregivers. Maternal and infant care teachers need to have the knowledge and skills of the health management of infants and young children, and to be able to effectively prevent and deal with the common health problems of infants and young children. This includes the observation and evaluation of the growth and development of infants and young children, and the timely detection and recording of any abnormalities. In terms of infant and child health management, maternal and infant care teachers need to master the correct feeding skills, including breastfeeding and artificial feeding knowledge, and be able to give reasonable dietary advice to ensure that infants and young children receive adequate and balanced nutrition. In addition, maternal and infant care teachers also need to have the basic ability to identify and handle common infant diseases, to judge whether they need timely medical treatment, and to provide appropriate first aid measures and care. For the personal hygiene and environmental hygiene management of infants and young children, maternal and infant care teachers also need guidance and education, including knowledge and skills in bathing, changing diapers, sleeping and cleaning the living environment. In short, infant health management skills are an indispensable part of the professional quality and skill requirements of maternal and infant care teachers. By mastering these skills, the physical health and comprehensive development of infants can be guaranteed.

4. Professional Ethics and Professional Ethics Requirements

4.1. Protection of privacy and confidentiality

In the profession of maternal and child nurse, professional ethics and professional ethics are very important requirements. One of them is protecting privacy and confidentiality. As a professional nurse, we should always keep in mind to protect the privacy of patients and customers and not disclose any personal information. Protecting privacy and confidentiality is not only a kind of professional ethics, but also a reflection of respect and care for patients and customers. In the implementation of the work, nurses must strictly abide by the relevant regulations, and shall not disclose the personal information of patients or customers without authorization, including but not limited to the name, age, address, medical history, etc. When processing and keeping relevant information, nurses should take safe and reliable measures to ensure that the privacy and personal information of patients and customers are not leaked and abused. At the same time, nurses should also have the ability to keep confidential and not disclose sensitive information at work to others, especially unauthorized individuals or organizations. Protecting privacy and confidentiality is not only the requirement of legal and professional ethics, but also the basis of building trust and good relationship between nurses and patients and clients. Only by strictly adhering to the principle of confidentiality can nurses win the trust of patients and customers and provide better nursing services. Therefore, nurses should always bear in mind the importance of protecting privacy and confidentiality, regard it as a basic requirement of professional ethics and professional ethics, and ensure that their behavior complies with professional standards and ethics.

4.2. Respect for family cultural differences

In the profession of maternal and child care teacher, professional ethics and professional ethics are required. As a maternal and child nurse, it is crucial to respect family cultural differences. Each family has its own unique cultural background and values, factors that can have effects on parenting styles and care needs. As mother and child care providers, we need to understand and respect the cultural differences of different families, and avoid making arbitrary judgments or imposing their own opinions on their values and habits. We should use an open mind to understand and adapt to the needs of families in different cultural backgrounds, and respect their decisions and choices. Only in this way can we establish trust and good communication, and provide more intimate and comprehensive nursing services for mothers and infants.

4.3. Abide by professional standards and laws and regulations

Compliance with professional standards and laws and regulations is an indispensable part of the professional quality and skill requirements of maternal and infant care teachers. As a mother and child nurse, we must strictly abide by the relevant professional standards, including respect and protection of the rights and interests of infants, mothers and families, protection of personal privacy, and maintaining professional ethics. In addition, maternal and infant care teachers should be familiar with and comply with relevant laws and regulations. For example, for infant care, mother and

child care teachers need to understand and comply with relevant hygiene regulations, such as proper disinfection procedures and personal hygiene requirements. When handling infant feeding and care, maternal and child caregivers also need to understand and comply with relevant food safety regulations to ensure the health and safety of the infant. Compliance with professional standards and laws and regulations can not only improve the professional ethics of maternal and infant care teachers, but also effectively protect the rights and interests of infants and families.

4.4. Cooperation with others and team spirit

In the profession of maternal and child care teacher, it is very important to cooperate with others and show team spirit. As a mother and child nurse, we need to work with different people such as other nurses, doctors, nurses and family members. This requires us to have good communication skills and be able to effectively communicate and coordinate work with others. In the process of cooperating with others, we need to maintain a positive attitude, respect the opinions and opinions of others, and be able to properly handle and resolve various problems and conflicts.

At the same time, it is also very important to show the team spirit. As a member of a team, we need to actively participate in the team work and carry forward the spirit of unity and mutual assistance. At work, we should take the initiative to cooperate with other team members, share experience and knowledge, solve problems together, and improve work efficiency and quality. Team spirit also requires us to have a good sense of teamwork and collaboration ability. In the work, we need to clarify the division of labor and responsibilities, reasonably arrange the working time and tasks, to ensure the orderly progress of team work. In the face of difficulties and challenges, we should support and encourage each other, overcome difficulties together, and achieve good work results.

In short, in the profession of maternal and child care teacher, cooperating with others and showing team spirit are indispensable requirements. Only through good cooperation and team cooperation, can we better complete the work tasks, provide quality nursing services, and escort the health of mother and children.

5. Learning and Development Requirements

5.1. Continuous learning and updating of knowledge

In the content outline of the professional quality and skill requirements of maternal and child care teachers, the fourth part is about the learning and development requirements. Learning and development are a very important part of any career development, and maternal and child nurses are no exception. In this section, we will focus on the topic of continuous learning and updating knowledge.

Continuous learning and updating knowledge is one of the important abilities that maternal and child nurses must have. With the development of The Times and the continuous progress of the society, medical technology and related research are also constantly updated and evolving. Therefore, as a mother and child nurse, he not only needs to master basic professional knowledge and skills, but also needs to continuously follow up the latest research results and medical progress, so as to provide the best quality care services for mothers and children. Continuous learning can not only help

maternal and child care teachers to keep up with the pace of The Times, but also enhance their professional competitiveness. By participating in relevant training courses, seminars and academic activities, maternal and infant care nurses can update their knowledge reserve, learn the latest nursing techniques and methods, and improve their professional level. In addition, continuous learning can also help maternal and infant care teachers to continuously broaden their horizons, increase their comprehensive understanding of maternal and infant health, and lay a solid foundation for providing comprehensive nursing services.

Therefore, as a mother and child nurse, continuous learning and updating knowledge is an indispensable requirement. Only by constantly maintaining the state of learning, and constantly improving our knowledge and skills, can we better meet the needs of mothers and infants, and provide more professional and better quality nursing services. Maternal caregivers should actively participate in learning opportunities, remain sensitive to the latest medical advances, and constantly improve their professionalism to adapt and respond to the changing and complex needs of maternal and infant care.

5.2. Participate in training and further study

Participating in training and further study is an important way to improve the professional quality and skill requirements of maternal and infant care nurses. Through participating in training and further training, maternal and infant care teachers can constantly update their professional knowledge and skills, understand the latest nursing theory and practice, and master advanced nursing techniques and methods. Training and further study can help maternal and infant nurses improve their understanding of the physiological, psychological and behavioral characteristics of newborns and infants, understand the development rules and needs of infants of all ages, and master the professional knowledge and skills of infant feeding, sleep, health care and other aspects. In addition, attending training and further study can also help maternal and infant care teachers improve their keen observation and judgment skills, improve communication and coordination skills, and cultivate good professional ethics and professional ethics. Through training and further study, maternal and infant care teachers can continuously improve their professional level and working ability, laying a solid foundation for providing high-quality maternal and infant care services.

5.3. Pursue professional certification and promotion

In the profession of maternal and child care teacher, it is very important to pursue professional certification and constantly improve their own skills. Maternal and infant care teachers need to continuously learn and update their knowledge to adapt to the rapidly changing market needs and industry development. Through the pursuit of professional certification, maternal and child caregivers can show their employers and clients that they have a certain level of expertise and skills, and increase their competitiveness.

In order to obtain professional certification, maternal and child care teachers need to take relevant training courses and examinations to obtain the corresponding certificates or qualifications. These certificates can be nationally or internationally recognized, such as national professional qualification certificate, international nursing division

certification, etc. Through these professional certifications, maternal and child care teachers can prove that they have certain professionalism and skills to lay a solid foundation for their career development. In addition, the pursuit of professional certification can also give maternal and child care teachers access to more learning resources and opportunities. Some certification bodies will provide professional training courses and learning materials to help maternal and child care teachers to learn deeply and understand the relevant knowledge. At the same time, certification can also allow maternal and child care teachers to join professional organizations or associations, maintain communication and cooperation with other peers, and jointly improve the level of the industry.

In addition to professional certification, maternal and child caregivers should also constantly improve their skills. With the continuous development of technology and medicine, the skills of maternal and child care are also constantly updated. Maternal and child care practitioners should actively participate in relevant training and seminars to understand the latest care techniques and methods to provide more professional and quality services. At the same time, maternal and child care teachers can also deepen their professional knowledge and contribute to the development of the industry by participating in academic research and professional exchanges.

In short, the pursuit of professional certification and improving their skills is an indispensable part of maternal and infant care teachers. By obtaining professional certification, maternal and child care teachers can prove their professional level and quality, and increase their competitiveness. At the same time, the continuous improvement of skills and learning of the latest knowledge can enable maternal and child care teachers to maintain a leading position in the industry and contribute to the development of the industry.

6. Conclusion

The professional quality of maternal and infant care nurses is the basis to ensure their correct performance of their duties. In the process of raising infants, maternal and infant nurses should have professional knowledge, responsibility and love and other qualities, to be able to provide a full range of nursing services for mothers and infants. Maternal and infant caregivers need to have multiple skills, including skills in infant feeding, safe care, psychological counseling, disease prevention and management. The mastery of these skills will enable maternal and infant care providers to better cope with various situations and provide high-quality care services. The professional quality and skill requirements of maternal and child care teachers are closely linked and complement each other. Professional quality is the embodiment of the comprehensive quality of maternal and child care teachers, and the mastery of skills is the embodiment of practical operation ability. Only by combining the two can mother and child care teachers better perform their duties. Through the discussion of the professional quality and skill requirements of maternal and child care nurses, we deeply realize the importance of maternal and child care nurses, and realize the importance of improving professional quality and skill level for improving service quality and meeting family needs. Therefore, we should strengthen the training and education of maternal and infant care teachers to provide them with better growth and development opportunities to achieve the best interests of infants and young children and families.
