Heirloom tomatoes are the single-most enchanting items to arrive at the farmers market each summer. Each varies in shape, size, and color—standing alone as a piece of art. Each has a story. Each is different from its neighbor, often possessing veins or dimples, similar to that of a human body. There is something so intriguing about holding them, studying them—it's like looking into their souls. The only trouble is having to choose which ones to take home... and the only thing worse is watching the summer come and go, knowing they will not be back until next year.
