Ключевые слова: педагогика, технология, цифровые технологии, игра, учебник, электронный учебник.

In the 1990s, a number of changes occurred in the education system. In particular, the rapid integration of digital technologies into the education system for educators led to the creation of new methodological guides, resulting in new changes for teachers year after year. At this point, it is important to note that digital technologies have already become an integral part of education.

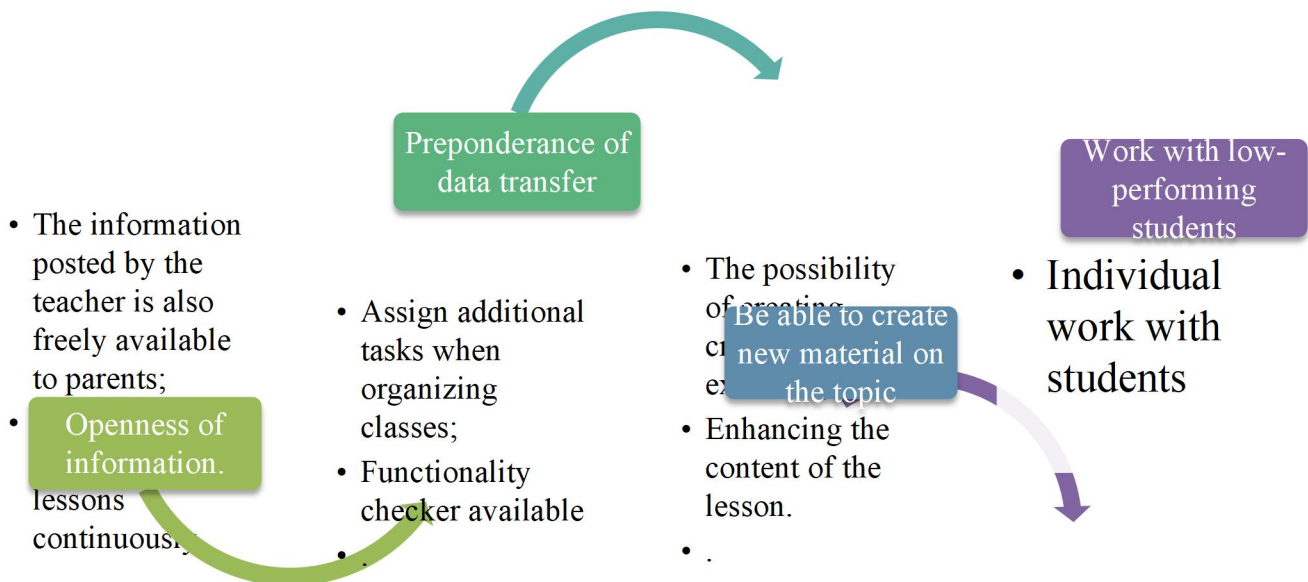

Today, it is impossible to imagine the education system without digital technologies. Specifically, there are several advantages to organizing lessons using digital technologies in the activities of primary education teachers. The benefits of using digital technologies in lesson activities with primary education students are as follows:

Based on the aforementioned points, organizing lessons is of great significance for students. Considering that technological devices are present in every household nowadays, children primarily use computers, phones, and similar devices for "gaming" activities. However, educators in schools should equip students with the skills to use technical devices productively and effectively. Moreover, by utilizing digital technologies, teachers can create various types of topic-related methods and interesting exercises using textbooks and online platforms.

By developing various interactive games related to the topic, lessons can be organized in a way that completely changes students' perception of technical and technological devices, and students will form an initial understanding of the advantages of digital technologies from the very first lessons.

The methodology of mastering electronic textbooks in primary education creates an opportunity for primary school teachers to properly allocate time when using electronic textbooks. Namely:

Supporting education, the cornerstone of a new Uzbekistan, is a top priority. Indeed, "...Salvation lies in education, salvation lies in upbringing, salvation lies in knowledge." This statement of our enlightened ancestors carries a deep meaning. Because, all noble goals are achieved through knowledge and education. In fact, the current changes in the educational process, innovative approaches to it, will undoubtedly make a great contribution to the development of knowledgeable, educated, and qualified personnel in the future. As each era has its own characteristics, so too are there unique development strategies. Taking into account the demands of modern times, the changes being introduced into the education system for young people, training personnel in accordance with world standards, as well as introducing digital technologies into the education system and effectively using them in primary schools, will undoubtedly lay the foundation for our development.
