

TEACHING HANDBALL TECHNIQUES AND TACTICS TO UNIVERSITY STUDENTS

U. A. Sadikov

Tashkent State University of Economics

Senior lecturer at the Department of Physical Culture and sports activities

Abstract: This article examines the theoretical and methodological aspects of teaching handball techniques and tactics to university students. Through comprehensive literature analysis, the study explores effective teaching methods, technical elements, and tactical approaches in handball education at the higher education level.

Keywords: handball, university sports, teaching methodology, technical skills, tactical preparation, physical education

Annotatsiya: Ushbu maqolada oliy o'quv yurtlari talabalariga gandbol o'ynash texnikasi va taktikasini o'qitishning nazariy va uslubiy jihatlari ko'rib chiqiladi. Adabiyotlarni har tomonlama tahlil qilish asosida tadqiqot gandbolni oliy ta'lim darajasida o'qitishning samarali usullari, texnik elementlari va taktik yondashuvlarini ko'rib chiqadi.

Kalit so'zlar: gandbol, talabalar sporti, o'qitish metodikasi, texnik ko'nikmalar, taktik tayyorgarlik, jismoniy tarbiya

Аннотация: В данной статье рассматриваются теоретические и методологические аспекты преподавания техники и тактики игры в гандбол студентам высших учебных заведений. На основе всестороннего анализа литературы в исследовании рассматриваются эффективные методы преподавания, технические элементы и тактические подходы в обучении гандболу на уровне высшего образования.

Ключевые слова: гандбол, студенческий спорт, методика преподавания, технические навыки, тактическая подготовка, физическое воспитание

INTRODUCTION

Handball represents one of the most dynamic team sports in university athletics, requiring a complex combination of physical abilities, technical skills, and tactical understanding [1]. The importance of developing effective teaching methodologies for handball in higher education institutions has become increasingly relevant due to its contribution to students' physical development and team-building capabilities [2].

METHODOLOGY AND LITERATURE REVIEW

This study employs a comprehensive literature review methodology, analyzing scholarly publications, focusing on handball instruction in higher education settings. The literature review encompasses international academic journals, coaching manuals, and sports education guidelines available in English, Russian, and European languages. The analysis framework concentrates on three primary dimensions: technical elements, tactical components, and teaching methodologies.

The reviewed technical elements encompass fundamental handball skills essential for university-level training. According to Williams [3], proper technical foundation includes systematic development of basic movements, ball handling, shooting mechanics, and defensive techniques. The literature particularly emphasizes the importance of progressive skill development, starting from basic movements to complex

technical combinations.

Analysis of tactical components reveals structured approaches to tactical education. Petrova and Ivanov [4] outline a comprehensive framework for tactical training, emphasizing the progression from individual tactical skills to team-level strategic understanding. The literature consistently emphasizes the interconnection between technical proficiency and tactical implementation.

Teaching methodology analysis focuses on pedagogical approaches specific to university-level handball instruction. Martinez and Rodriguez [5] present evidence supporting progressive teaching methods that integrate both theoretical understanding and practical application. The literature indicates a clear shift towards game-based learning approaches while maintaining systematic skill development protocols.

RESULTS AND DISCUSSION

The comprehensive analysis of literature reveals several significant findings regarding handball instruction in higher education settings. These findings can be categorized into four main areas: technical development, tactical understanding, teaching approaches, and assessment methods.

Regarding tactical understanding, Brown et al. [6] present compelling evidence supporting the integration of theoretical instruction with practical applications. The research indicates that students develop better tactical awareness when theoretical concepts are immediately followed by practical implementation. This finding aligns with modern educational theories emphasizing experiential learning.

In terms of technical development, research by Thompson [7] demonstrates that systematic technical training should form the foundation of handball instruction. The literature emphasizes the importance of establishing strong fundamental movements and ball control before progressing to more complex technical elements. This approach has shown consistent success in developing player competency across various skill levels.

Modern teaching approaches revealed in the literature consistently favor progressive skill development methodologies. The research indicates that successful programs typically incorporate game-based learning scenarios, allowing students to develop both technical skills and tactical understanding in context. Video analysis has emerged as a particularly effective tool for both instruction and feedback.

The integration of these findings suggests that successful handball instruction in higher education requires a carefully structured approach that balances technical development with tactical understanding. The literature consistently supports the use of progressive teaching methodologies that adapt to student skill levels while maintaining clear developmental pathways.

Cross-analysis of multiple studies indicates that institutions successfully implementing these approaches report higher student engagement and better skill development outcomes. The findings also suggest that regular assessment and feedback mechanisms play crucial roles in maintaining student progress and motivation.

CONCLUSION

Based on the comprehensive literature review and analysis conducted in this study, several key conclusions can be drawn regarding the teaching of handball techniques and tactics to university students. The research clearly demonstrates that effective handball instruction in higher education requires a carefully balanced and structured approach.

The findings emphasize that successful handball education programs must integrate both technical skill development and tactical understanding in a progressive manner. The literature strongly supports the notion that fundamental technical skills serve as the foundation upon which tactical knowledge and advanced gameplay strategies can be built. This hierarchical approach to skill development appears to be crucial for long-term student success in the sport.

The importance of systematic assessment and continuous feedback emerges as a critical component of successful handball instruction. Regular evaluation of both technical proficiency and tactical understanding provides essential guidance for both instructors and students in the learning process.
