"Pedagogy and Social Sciences and Humanities."

Abstract: This article analyzes the interactions between economics and pedagogy, and the importance of effective management of economic resources in the field of education. The effectiveness of the education system depends not only on its quality, but also on the financial and material resources allocated to it. The article examines the impact of economic resource management on the educational process and how to maintain a balance between pedagogical goals and economic interests. It also shows how the correct distribution of economic resources in the education system and their effective use can influence the improvement of the quality of education. The article highlights the prospects and current problems of effective management of economic resources in the field of education in the context of Uzbekistan.

Keywords: economics, pedagogy, educational resources, effective management, economic impact, financial management in education, Uzbekistan, education system, resource allocation

Introduction

The fields of economics and pedagogy are close and interconnected. The education system serves to ensure not only scientific achievements, but also economic and social progress in society. Therefore, effective management of economic resources in the education system affects not only the quality of education, but also the economic development of the country. In Uzbekistan, the importance of effective management of economic resources in improving the education system and increasing its effectiveness is increasing. In this regard, there is a need to ensure the optimization of funds, infrastructure, and human resources used in the education system.

Proper distribution of economic resources in the modern education system, their effective management at all stages of the educational process contributes to improving the overall quality of education. Effective management of educational resources creates a solid foundation for economic development in society, and also opens up opportunities for the spiritual and social development of the new generation.

The importance of economic resource management in the education system

Management of economic resources in the education system is considered in two main directions: the first is the development of the material and technical base of educational institutions, and the second is the targeted and effective allocation of funds to improve the quality of education. Among economic resources, teachers' salaries, textbooks and materials, repair of educational buildings, computer technologies, and other technical means occupy an important place. These resources determine the effectiveness of education and directly affect the quality of the educational process.

For the effective management of economic resources in the education system, it is necessary, first of all, to introduce clear and transparent mechanisms for planning budget allocations. Such approaches as the application of new technologies, the development of distance learning, and the

introduction of innovations in the educational process not only increase the effectiveness of the educational process, but also serve to save economic resources. The introduction of innovative technologies and digital resources into the educational process creates new opportunities for effective management of economic resources.

Effective allocation of economic resources in the education system

Effective distribution of economic resources in education not only ensures the financial stability of educational institutions, but also serves to improve the quality of education. Economic resources in the field of education are mainly allocated to the following areas: student services, the infrastructure of educational institutions, wages and advanced training of teachers and other pedagogical personnel, the introduction of teaching materials and technologies. For the effective functioning of the education system, it is necessary to distribute resources correctly and purposefully.

The effective allocation of economic resources in the field of education in Uzbekistan creates many problems. Social and economic inequalities in society widen the gap between budget allocations to educational institutions. Educational resources are insufficient for students living in rural areas, which leads to a decrease in the quality of education. In addition, there are a number of problems in improving the qualifications of teachers and their working conditions.

If the material and technical base of educational institutions is strengthened with the help of innovative approaches, this will not only provide students with quality education, but also contribute to increasing economic efficiency in the field of education. By applying technologies in education, it is possible to more effectively manage resources and optimize the educational process.

Optimization of qualified resources of pedagogical personnel:

In the process of effective management of economic resources, the most important factor should be considered the optimization of the qualified resources of pedagogical personnel. Improving the qualifications of teachers, investing in their professional development, as well as improving their working conditions, is of great importance in increasing the effectiveness of the education system. Through the introduction of modern pedagogical technologies, it is possible to effectively manage the influence of teachers on the educational process. Improving the internal systems of educational institutions and improving the qualifications of pedagogical personnel is the most important factor influencing the further economic development of the country.

Proper allocation of resources and introduction of innovations in education

In the modern education system, the effective distribution of economic resources is ensured, especially through the application of innovative approaches and technologies. Innovative technologies contribute to the creation of effective mechanisms for resource management in education. For example, the process of educating students can be optimized using distance learning platforms, online courses, and digital resources. Also, the availability of digital textbooks and educational materials for teachers in online systems is one of the important tools used in the effective management of educational resources.

By applying innovative technologies in educational institutions, it is possible to save resources and increase efficiency. By implementing technological innovations at all levels of the education system, it is possible not only to improve the quality of education, but also to expand the opportunities for students to acquire modern knowledge.

Conclusion

Effective management of economic resources in the education system has a great influence not only on improving the quality of education, but also on the economic development of society. It

is necessary to properly distribute economic resources in the field of education, expand opportunities for students to receive education, develop the material and technical base of educational institutions, and effectively implement the processes of professional development of teachers. The transition of Uzbekistan to a digital economy and the introduction of innovative approaches will become an important factor in the development of the education system.
