Annotation: This article provides a scientific and theoretical analysis of the impact of ChatGPT and other artificial intelligence tools on the modern educational process. The study explores the role of AI in improving educational quality, transforming teaching and learning activities, and addressing issues related to academic integrity. Practical recommendations for the effective and responsible use of artificial intelligence in education are proposed.

Keywords: artificial intelligence, ChatGPT, digital education, educational technologies, distance learning, academic integrity.

Аннотация: В статье проводится научно-теоретический анализ влияния ChatGPT и других инструментов искусственного интеллекта на современный образовательный процесс. Рассматриваются возможности повышения качества образования, трансформация деятельности преподавателей и студентов, а также проблемы академической честности. Разработаны практические рекомендации по эффективному и ответственному использованию искусственного интеллекта в сфере образования.

Ключевые слова: искусственный интеллект, ChatGPT, цифровое образование, образовательные технологии, дистанционное обучение, академическая честность.

Last in years digital of technologies intense development society all sectors , particularly education to the system noticeable impact is showing . Information and communication technologies education to the process wide current to be as a result of teaching traditional forms new approaches with is being enriched . In this process artificial intellect technologies , including ChatGPT such as smart systems separately importance profession is doing .

ChatGPT natural the language again to work based artificial intellect model be , those users with interactive communication to do , complicated concepts explanation and texts create to the possibility has . This opportunities him/her education in the process effective tool as to use ground However , this of technologies education to the system integration pedagogical and moral also raise issues is issuing .

Artificial intellect technologies in education place

Artificial intellect education in the process study materials personalization , knowledge evaluation automation and remote education efficiency in increasing important tool is . ChatGPT using students own knowledge to the level suitable explanations they get , complicated topics independent their studies possible .

From this In addition , AI- based systems education in the process analytical approach strengthens the students ' knowledge level and activity permanent Individualized education , regularly monitored directions working This is education of quality to increase service does .

ChatGPT of pedagogical opportunities

ChatGPT teacher in the activity assistant technology as application It is possible . That lesson developments , testing questions , practical assignments and methodical recommendations preparation process noticeable at the level As a result teacher own time creative and interactive to training more directs .

Students for and ChatGPT knowledge independent mastery , scientific texts with work and critical thinking skills in development important importance Especially remote education under the circumstances this tool knowledge to take opportunities expands .

Problems and academic honesty issues

Artificial intellect from the means use with related main from problems one academic is honesty . Students by independent work with AI complete to perform cases knowledge of quality to decrease take arrival You can also use ChatGPT by presented done information every always full clear not being able to probability there is .

Therefore , artificial from the intellect in use critical approach and control mechanisms current to grow important is considered .

AI tools effective use roads

Education in the process artificial intellect from technologies effective use for following approaches recommendation is being done :

- AI literacy increase ;
- boot and legal norms working exit ;
- artificial intellect assistant tool as application ;
- independent and creative to think directed assignments multiplication .

Conclusion

Conclusion as in other words , ChatGPT and artificial intellect tools education process modernization in doing important role They play . education individualization , knowledge to take process convenience and innovative approaches current in the process of big to opportunities However , this from technologies effective use for responsible and scientific based approach demand is being done .
