Abstract: This study aims to explore the evolution, characteristics, and advancement pathways of youth social organizations in the construction of digital villages. Through literature review and field research, this paper analyzes the positive role of youth social organizations in the construction of digital villages and proposes corresponding advancement strategies. The study finds that youth social organizations possess innovativeness, flexibility, and public welfare characteristics in the construction of digital villages, and can effectively promote the in-depth development of digital village construction through paths such as expanding funding sources, improving governance systems, strengthening the construction of digital platforms, activating talent dynamics, and developing digital agriculture industries.

Keywords: Youth Social Organizations; Digital Village Construction; Evolution; Characteristics; Advancement Pathways.

1. Introduction

With the rapid development of information technology, the construction of digital villages has become an important force in promoting the rural revitalization strategy. Youth social organizations, as an important force in social development, are increasingly highlighting their role in the construction of digital villages. This paper aims to analyze the evolution, characteristics, and advancement pathways of youth social organizations in the construction of digital villages, in order to provide theoretical support and practical guidance for the in-depth development of digital village construction.

2. The Evolution of Youth Social Organizations' Participation in Digital Village Construction

The evolution of youth social organizations' participation in digital village construction can be divided into three stages: initial exploration, rapid development, and deepening integration.

(1) Initial Exploration Stage

In the initial exploration stage, youth social organizations mainly focus on how to introduce and popularize digital technology in rural areas. This is because with the continuous development of internet technology, rural areas have begun to gradually phase out traditional lifestyles and start to embrace the convenience and changes brought by digital technology. They will hold lectures and training on the application of digital technology in rural areas, teaching villagers basic digital skills, such as how to use computers, mobile phones and other smart devices, how to use social media for communication and interaction, and how to access information through the internet, how to shop online, etc. These lectures and training will not only improve the digital literacy of villagers but also provide more possibilities and opportunities for the development of rural areas.

(2) Rapid Development Stage

In the current stage of rapid development, with the

continuous advancement and expansion of application scenarios of digital technology, more and more youth social organizations are gradually entering the stage of rapid development, starting to focus on the deep integration of digital technology and agricultural production, and regarding it as an important way to promote the development of digital agriculture. They believe that digital technology can play an important role in agricultural production, such as using remote sensing technology for farmland monitoring, using big data technology for precision planting, etc., thereby improving the efficiency and quality of agricultural production. Therefore, they will actively promote the application of digital technology in agricultural production and organize relevant training and practical activities to help villagers better master the application skills of digital technology in agricultural production.

(3) Deepening Integration Stage

In this era of rapid development of information technology, youth social organizations have also begun to actively participate in the improvement of the digital village governance system and the construction of digital service platforms, making an important contribution to the comprehensive upgrade of digital village construction. They believe that to achieve a deep integration of digital technology and rural governance, it is not only necessary to strengthen the application of technology but also to pay attention to the construction of the governance system. For this reason, they will actively participate in rural governance, assist in establishing digital service platforms for villages, provide more convenient rural services for villagers, and let villagers better enjoy the convenience and benefits brought by digital technology.

In addition to providing digital services, youth social organizations will also actively participate in rural planning and construction, promote the sustainable development of villages by improving infrastructure and living environment, and achieve the great goal of rural revitalization. They will continue to innovate, inject new vitality into the development of villages with digital technology, and contribute to the modernization of villages, prosperity of farmers,

modernization of agriculture, and comprehensive progress of rural areas.

3. Characteristics of Youth Social Organizations' Participation in Digital Village Construction

In the process of participating in the construction of digital villages, youth social organizations show characteristics of innovation, flexibility, and public welfare.

(1) Innovation

Youth social organizations have indeed played an important role in promoting rural economic development, because they not only have strong innovative awareness and ability, but also can find new opportunities in the digital wave, and in combination with the actual situation of the local area, deeply understand the needs and characteristics of the village, so as to innovatively explore digital solutions that meet the development needs of the village. These solutions can not only improve the digital level and efficiency of the village, thereby promoting the development of the rural economy, improving the living standards and happiness of rural residents, but also bring more employment opportunities and business opportunities to the village, thus promoting the modernization and prosperity of the village.

(2) Flexibility

Youth social organizations are an important force in rural revitalization, with very flexible organizational forms and operation mechanisms. These organizations can quickly adjust their service content and methods according to market demand and policy changes, thus providing strong support for the development of the village. Youth social organizations have higher innovative awareness and entrepreneurial spirit, can quickly formulate service strategies that meet the development needs of the village according to market demand and policy changes, and can quickly promote and apply them in the village. Youth social organizations also actively participate in the construction of digital villages. They use new technologies and methods to continuously innovate and optimize the service model of digital villages, thereby improving the effect and efficiency of the construction of digital villages.

(3) Public Welfare

Youth social organizations always adhere to the purpose of public welfare, continuously deepen their understanding and recognition of rural digital construction and development, actively adapt to the new situation of digital development, and actively participate in the construction and development of rural areas. In the development of the village, we adhere to the firm belief of providing high-quality digital services and support for the village, go all out to solve various problems encountered by the village in the development of digitalization, and cultivate digital talents for the village through holding relevant training classes and lectures, improving the application level of digitalization in the village. At the same time, we also actively introduce and promote various digital technologies and applications, and strive to promote the sustainable development of the rural economy through continuous innovation and practice, injecting new vitality and momentum into the development of the village.

4. Advancement Pathways for Youth Social Organizations' Participation in Digital Village Construction

To effectively promote the participation of youth social organizations in the construction of digital villages, this paper proposes the following pathways:

(1) Expand the sources of funds for the construction of information infrastructure

The role of youth social organizations in the construction of digital villages is very important. Their responsibilities include providing necessary assistance and cooperation for the work of the government, enterprises and all sectors of society in the construction of digital villages, and also playing a role as a bridge and link in the process of constructing digital villages. Youth social organizations should clearly define their position and responsibilities in the construction of digital villages, and strive to lay a solid foundation for the construction of digital villages. On this basis, youth social organizations should also actively seek the support of the government, enterprises and all sectors of society, strive for more resources and funds, so as to better complete their own work and realize their social value. In the construction of digital villages, funds are an important issue. Youth social organizations should expand the sources of funds through cooperation, donations, and other ways, to provide a stable financial guarantee for the construction of digital villages.

(2) Improve the governance system of digital village construction

Youth social organizations should leverage their unique advantages and actively participate in the construction and improvement of the digital village governance system. In this regard, youth social organizations can promote the digital transformation of rural governance through various forms of publicity, organization activities, and academic research. Through these methods, it can help rural residents better understand digital technology, promote the digital process of rural governance, and improve the efficiency and service level of rural governance.

In addition, youth social organizations can assist the government in formulating targeted policies and standards, promoting the development direction and path of digital village construction in accordance with policies and regulations. In this way, it can ensure that the direction and goals of digital village construction are adapted to the actual situation of China's agriculture and rural areas, and provide corresponding support and protection. At the same time, it can also better meet the digital needs and information service needs of farmers, achieve digitalization and intelligence of rural governance, and make the construction of digital villages better serve rural development and farmers' lives.

(3) Strengthen the construction of digital sharing platforms

Youth social organizations should make full use of their own advantages and resources, actively play their role, and promote the diversified development of the rural economy through digital sharing platforms to help rural revitalization. First, it is necessary to fully pay attention to and strengthen the construction and operation of digital sharing platforms, build a public platform for rural economic development through continuous innovation in technology and operation methods, strengthen information sharing and communication in rural areas, and promote the informatization of agricultural production and rural economic and social development, thereby achieving the transformation and upgrading of the

rural economy. Second, it is necessary to strengthen talent training and technological innovation, improve the professional skills and technical level of members of youth social organizations through various training classes, on-the-spot inspections, and remote education, to adapt to the needs of modern agriculture and rural economic development, and provide strong talent support for the development of the rural economy. Third, it is necessary to fully integrate rural resources, provide services such as information release, agricultural product sales, and rural tourism, help farmers obtain more market information and opportunities, improve the added value and competitiveness of agricultural products, and promote the development.

5. Conclusion

Youth social organizations are playing an increasingly important role in the construction of digital villages. By deeply analyzing their evolution, characteristics, and advancement pathways, we can better understand and grasp the role and value of youth social organizations in the construction of digital villages. In the future, it is essential to continue to strengthen cooperation between youth social organizations and various parties such as government departments and enterprises to jointly promote the in-depth development of digital village construction and contribute

youthful strength to rural revitalization.
