

# Exploring New Approaches and Practices in College Student Class Management

Yuan Zhang

School of Politics and Management, Yan 'an University, Yan 'an 716000, China

**Abstract:** This paper explores new ideas and practices in class management for college students. With the development of university education and the promotion of social change, the traditional methods of class management have gradually revealed their shortcomings. This article first analyzes the importance and challenges of class management for college students from a theoretical perspective, and then proposes some new management ideas. Then, through specific case studies, it discusses the application and effectiveness of these new ideas in practice. Finally, the advantages and limitations of the new ideas are summarized, and directions for further research in the future are suggested.

**Keywords:** College Students, Class Management, New Ideas, Practice.

## 1. Introduction

College students need not only to make progress academically but also to cultivate various abilities and qualities. Class management can provide students with a good learning environment and atmosphere, facilitating their comprehensive improvement in academic achievements, moral cultivation, and social adaptability. Through effective class management, students' self-discipline, sense of responsibility, and teamwork skills can be fostered, enabling them to better adapt to future career development and social life. Traditional methods of class management often adopt uniform and rigid approaches, which result in students lacking autonomy and engagement within the class. This type of management may lead to passive learning among students, loss of interest in learning, and restrictions on their creativity and personal development.

## 2. The Importance and Challenges of Class Management in College

1. The importance of class management for college students cannot be ignored.

(1) Class management is an important means to cultivate students' comprehensive qualities and growth.

Through effective class management, a good learning environment and atmosphere can be provided for students, stimulating their enthusiasm and creativity in learning. Good class management can help students establish the correct attitude and values towards learning, increasing their engagement and initiative in the learning process.

(2) Class management has a direct impact on students' academic achievements.

By organizing and planning classroom activities, promoting teacher-student interaction and cooperation, class management can improve students' learning effectiveness and academic performance. Effective class management can help teachers better understand students' learning needs and difficulties, provide targeted teaching guidance, assist students in overcoming learning obstacles, and maximize their potential.

(3) Class management is also crucial for cultivating students' moral character and social adaptability.

In the classroom, students establish close relationships with classmates and teachers, fostering good interpersonal relationships, teamwork skills, and communication abilities through collective learning and interactive communication. Class management can advocate for good behavior norms and values, guide students to develop proper moral concepts and a sense of social responsibility, and cultivate their civic literacy and social adaptability.

2. Traditional methods of class management also face some challenges.

(1) Insufficient student autonomy is a common problem.

Traditional class management often adopts a unified management model where students lack decision-making power and participation, leading to passive learning and strong dependence. This restricts the development of students' individuality and creativity.

(2) Traditional class management methods are relatively limited.

Common management methods include disciplinary constraints, rewards, and punishments, which may not meet the diverse needs and characteristics of different students.

(3) To improve the effectiveness of class management for college students, it is necessary to explore new ideas and methods.

On one hand, more flexible and diversified management methods can be introduced, such as encouraging student participation in class affairs, providing personalized learning support, etc., to promote student autonomy and motivation.

## 3. Introduction of New Approaches

### 1. Cultivating Student Autonomy

To enhance students' self-management abilities and autonomy, class managers can take certain measures. For example, encouraging student participation in the decision-making process of class affairs and advocating for freedom of expression and student-led classroom discussions. This can stimulate students' motivation and creativity, thereby improving the effectiveness of class management.

### 2. Introducing Interactive Teaching

Interactive teaching is an effective approach to class management. By incorporating methods such as group discussions, problem-solving, and role-playing, students' interest and engagement in learning can be stimulated.

Additionally, this approach can also foster teamwork and communication skills among students, further enhancing the effectiveness of class management.

#### 4. Analysis of Practical Cases

##### 1. Establishment of Student Self-Government Organization

In the class management of a certain university, class managers encourage students to establish a self-government organization to coordinate and manage internal affairs of the class, aiming to promote students' initiative and sense of responsibility. This practical case aims to cultivate students' autonomy and teamwork, provide them with more opportunities for involvement, and facilitate the effective operation of internal affairs within the class. Through a period of observation, it has been found that the establishment of a student self-government organization has a positive impact on the class atmosphere and management effectiveness. Students actively participate in the establishment and operation of the self-government organization, demonstrating higher initiative and responsibility. They have the opportunity to participate in class decision-making and planning, and communicate students' needs and issues to class managers through student representatives.

##### 2. Application of Interactive Teaching in the Classroom

In another university, class managers have implemented interactive teaching methods to stimulate students' interest and engagement in learning. Through activities such as group discussions and role-playing, students actively participate in the classroom, sharing their perspectives and experiences, and engaging in intellectual exchange and knowledge sharing with their peers. The results of this practice show that the application of interactive teaching has a positive impact on students' academic performance and the class atmosphere. Through activities like group discussions and role-playing, students can freely express their viewpoints, enhancing their confidence and oral expression skills.

#### 5. Advantages and Limitations of New Approaches

Based on theoretical analysis and practical cases, this article summarizes the advantages and limitations of new approaches.

##### 1. Advantages

(1) Enhancing student autonomy and creativity The new approaches emphasize cultivating students' autonomy and encouraging them to take initiative and demonstrate creativity in their learning. Compared to the strict regulations and guidance of traditional management methods, new approaches provide a more relaxed learning environment, allowing students to have more freedom in choosing learning content, setting learning goals, and adopting personalized learning methods.

(2) Stimulating students' interest and engagement in learning Interactive teaching is an important characteristic of new approaches, which can stimulate students' interest and engagement in learning. Compared to the traditional one-way lecture model, interactive teaching focuses on interaction between teachers and students, as well as collaboration among students. Teachers can engage students in thinking and participation through questioning, discussions, group activities, etc., making the classroom more dynamic and interesting.

##### 2. Limitations

Although new approaches have clear advantages in promoting student autonomy, creativity, and teamwork, there are also limitations in their implementation.

(1) Class managers need to have relevant educational theory knowledge and management skills to implement new approaches. They need to understand the advantages and disadvantages of different teaching methods and make reasonable choices and adjustments based on class characteristics and student needs. At the same time, managers also need to have good organizational and communication skills to effectively guide student participation and cooperation.

(2) Schools and educational institutions need to provide appropriate support, including teaching resources, training, and professional guidance. The implementation of new approaches may require new teaching materials, teaching tools, and technological equipment. Additionally, teachers may need training to enhance their abilities and qualities in interactive teaching. School leaders and educational institutions need to provide support and encouragement, creating a good working environment and conditions for teachers and class managers.

(3) There may be differences in applicability among different classes and students. The implementation of new approaches needs to be adjusted according to the characteristics and needs of different classes. Teachers and class managers need to understand the background, interests, and skill levels of students in each class in order to design teaching and organize management accordingly. For certain special student groups, such as special education students or students with learning disabilities, different teaching strategies and support measures may be required.

#### 6. Conclusion

Future research can further explore the role positioning of class managers under new approaches. In traditional class management models, class managers often play the roles of guiding, supervising, and enforcing discipline. However, in new approaches, class managers need to transform into guides, collaborators, and facilitators for students, devoted to stimulating student autonomy and creativity. Researching the acceptance of new approaches among different types of students is also a key issue. Different students have individual characteristics, learning styles, and interests, which may lead to varying degrees of acceptance towards new approaches. Evaluating the specific effects of new approaches is also an important research direction. Although case analysis has demonstrated the advantages of new approaches in student autonomy and interactive teaching, further research is needed to quantify and evaluate these effects. Researchers can employ quantitative and qualitative research methods, combined with teaching evaluation tools and student feedback data, to measure student learning outcomes, engagement, and satisfaction under new approaches.
