

## **AI Tools in Forensic Education**

This year's theme of the AAFS 2025 National Meeting was, "Technology: A Tool for Transformation of Tyranny." There were multiple workshops focused on the implementation of artificial intelligence (AI) in teaching and research and dozens of abstracts were published in the proceedings discussing the use of the tool. Open AI is marketing its ChatGPT tool for education. Microsoft CoPilot is included in Microsoft's products. There are myriad other free and paid AI offerings for generating images, text, music, and speech. Students who grow up using AI are being called AI natives; AI tools are being included in instrumentation interpretation tools. At the *Journal of Forensic Science Education*, we are interested in the educational implementation of generative AI tools for teaching or learning. We look forward to your submissions sharing your ideas and innovations.
