“Internet plus” is a new form of economic and social development driven by innovation in knowledge society 2.0. With the continuous deepening of the reform of talent training mode, the concept of mixed teaching is gradually taking root in people's minds. To promote the development and reform of the school's teaching management, Zhongliang Xiangyun Branch of Chengdu Longjiang Road Primary School has improved the school's teaching management ability and level as a whole by utilizing the high-quality innovative educational resources provided by the Tsinghua University project team's Internet platform. The school utilizes the high-quality curriculum resources provided by Tsinghua University's Internet platform to continuously optimize teaching methods and measures, and explores the goal of a smart classroom around core literacy. We focus on deep learning, combined with the concept of the new national curriculum standards and the requirements of the digital transformation of education, to propose a new idea of smart classroom teaching in schools. We use online research and learning resources to enrich teacher training paths and provide talent support for classroom reform. In addition, the school combines offline research and training platforms to improve the teaching level of teachers and enable their growth. We rely on online teaching management services to improve the management level of cadres and teachers, and further ensure the high-level implementation of school classroom teaching and the high-quality development of classroom teaching. These measures have effectively promoted the education and teaching ability and level of all teachers in the school and successfully promoted the development of school teaching management towards a more scientific and efficient direction.

### Keywords

“Internet plus”, Teaching Management, Smart Classroom
