

Total lab-confirmed cases: 16,169 Total associated deaths: 988 Total recovered cases: 5,389 New cases: 1,178

National COVID-19 Campaign

The main strategy of the Ministry of Health (MOH) for the control of COVID-19 is active case finding using electronic tools, taking advantage of the capacity of the national primary health care (PHC) network, and community engagement. To accomplish this, all people are asked to participate in the screening process using the MOH's self-assessment portal (salamat.gov.ir). Health workers and public volunteers actively contact suspected cases using information recorded in this portal, as well as the electronic health record (SIB portal). They actively evaluate individuals, follow-up them, and provide them with necessary information. Where needed, clients are referred to 16-hour treatment clinics, which are specifically set up for the diagnosis and treatment of the disease, to the hospitals, or will be treated at home. The preliminary results of this national campaign (launched nationwide last week) is provided in this factsheet.

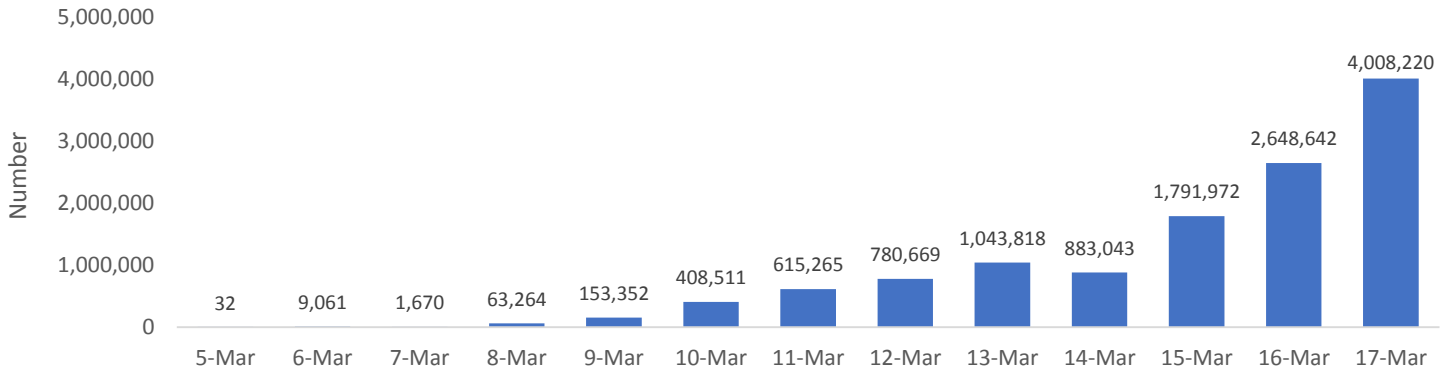

Results of COVID-19 active evaluation in the SIB Portal & Self-assessment in Salamat portal

Of 15 million screened individuals, 35% are registered in Salamat portal and 65% are registered in SIB portal

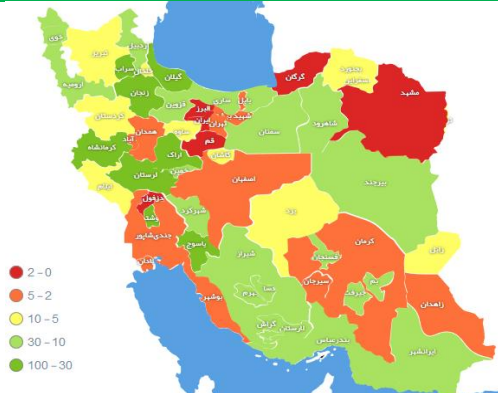

Result of the 16-h clinics

Only 5% of clients referring to 16-h clinics are referred to hospitals by the healthcare providers. About 94% of these clients are apparently healthy without COVID-19 symptoms, or are recommended to stay at home by the general practitioner of the 16-h clinic.

Number of Individuals Screened for COVID-19 Per Day

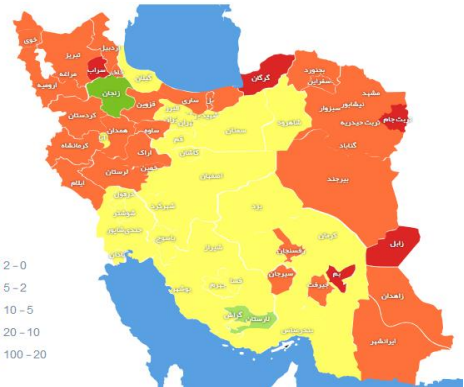

The graph shows daily increase in the number of individuals visiting the screening portals for the assessment of COVID-19 symptoms.

Screening rate of COVID-19 (by location)

There is diversity in the proportion of individuals screened for COVID-19.

Registration rate in Salamat portal (by location)

There is diversity in the registration in salamat portal in different localities.
