

# College and University Library Statistics

Statistical data concerning college and university libraries is included in the January issue so as to provide librarians with information as early as possible. The statistics and comments included in these pages have been prepared by Dale Bentz, University of Tennessee Library (Group I); Dan Graves, University of Kansas Library (Groups II and III); and Wendell W. Smiley, East Carolina College (Teachers Colleges).

Ninety college and university libraries in Group I submitted statistics this year, which represents an increase of 13% over last year when only 79 institutions reported. Of the 70 libraries included in the published tables last year, 65 are repeated this year. Failure to submit reports on time, insufficient data, and lack of space in the publication medium are responsible for all exclusions.

Seven Group I institutions reported no salary data, and an increasing number of libraries excluded this information for the top administrative positions. Until more salary information is reported, these statistics lack much of their potential usefulness. Perhaps the statistical form should be revised to request information that can be released for publication. This data should be available from all libraries for use in computing the averages for the group. The median figures listed represent only that information which is published. Only a few institutions report salary data as confidential with a request that it not be published.\*

Group I undertakes to include those institutions which grant a significant number of doctors' degrees (also all state universities), and Group II those which do not qualify in this respect although some Group II libraries have far greater resources than others in

\* See page 51 for a comparison of Group I statistics, 1947-48—1951-52.

Group I. The distinction between Group II and Group III is based on library operating expenses. The dividing line is drawn at the \$30,000 figure. Space and other publication exigencies prevent the drawing of hard and fast rules, and inclusion in one or another group should not be a cause of either rejoicing or complaint.

Reports for libraries falling in Groups II and III were received from 158 institutions as compared with 142 last year and 128 the year before. Thirty reports could not be used because of space limitations, incomplete data, or because they were received too late for inclusion in the tabulations. Fewer confidential statistics were reported this year, but too many reports are still lacking in data that would be useful.

An attempt was made to include as many libraries as possible from last year's report to aid in comparisons, but for various reasons only 43 of the 58 in Group II are the same and 53 of the 70 in Group III are the same. A greater number of Catholic institutions are included in this year's report.

Medians were determined from the figures appearing without footnotes in the tables.

For several years now the number of teachers college libraries reported in these tabulations has averaged about the number (53) which reported for 1951-1952. The largest number to report in any one year was about 70 in the 1949-1950 compilation. This year all reports received are included in the tabulations. Seventy libraries could be reported without expanding the space devoted to this group. The more libraries included in these tabulations, the more useful the data become. It is hoped that more libraries will put their reports into the hands of the committee in time to be included in future tabulations.
