

***IJAHP is now indexed in SCOPUS***

September 15, 2018

*IJAHP Editor-in-Chief at ISAHP 2018 workshop*

We have good news for our readers and authors! *IJAHP* has been officially approved for indexing in SCOPUS beginning with all articles published in 2018. This means that our journal constitutes not only a useful source for AHP/ANP theory and applications, but is also an accepted academic outlet for our scholarly readers and authors.

Also, beginning in this issue, we will have a section called “Special Topic Articles.” This section will undergo the same standard peer review process as the rest of the articles. However, we will invite a guest editor to coordinate the publication process for the articles in this section based on the specific choice of topic. We consider this approach to be more practical than the current “special issue” practice. For example, rather than waiting to have enough articles to publish a special issue on Fuzzy AHP, we have invited Dr. Cengiz Kahraman, to guest edit our inaugural “Special Topic Articles” section focusing on Fuzzy AHP and are including three articles on this topic.

Finally, we are all back from the International Symposium of the Analytic Hierarchy Process ISAHP 2018 that took place in Hong Kong from July 12-15. A large number of the old timers were there and we spent countless moments remembering Tom Saaty, our founder, and the many anecdotes about him and good times we all had with him. In this issue, Rozann Saaty has prepared a summary of the symposium that will be of interest to both those who could not attend the symposium and also those who were there.

Enjoy this issue,

A handwritten signature in black ink, appearing to read "Enrique Mu".
