While compiling the proceedings of a symposium on the ecology of the Kalahari Ecosystem (October 1983), the authors became aware of a diversity of publications which exist pertaining to the "Kalahari" (*sensu lato*) as an ecosystem. It is assumed that a provisional compilation of the available data serves a useful purpose and is therefore included in these proceedings.

No claim as to complete coverage is proposed in this outline and items are included with a decided emphasis on the Kalahari Gemsbok National Park (*sensu stricto*) as such. Entries range from climatology and groundwater chemistry to botany, zoology and social anthropology.

The help received from Mr. M. P. L. Main of Botswana in this *collectanea* is acknowledged with acclaim and one looks forward to his envisaged publication (on a much larger scale) on the Kalahari in the not too distant future.

Several authors contributing to the present volume have also helped by providing some of the references, which we are thankful for.
